The Connection between Keeping the Republic and Mayflower

There is a strong relationship in keeping the republic and the Mayflower compact of 1620. This relationship emerged from the idea of church agreeing to form a civil government. The foundations of American constitutionalism booked by McLaughlin, Andrew explain the aspects that join the republic and the Mayflower. The relationship is also based on the beliefs of the world of God as it reflected the higher law and the government by the rule of law. The republic had its legislation based on the constitution, but the impacts of the religion are relevant in promoting justice in the American society. The Mayflower reflected the view of the government that emanated from Christians thinking as it preserved the presence of God and its combination into a civil agency (Barbour & Wright, 2013).

The laid platforms of the civil government were based on the presence of God that allowed for declaration of relevant equal laws and constitutions. The connection between the republic and the Mayflower was because of the civil body. The Mayflower is one of the relevant principles that relate to Judeo-Christian view of government. This has distinguished the Americans from all the others. As a result, it has created a covenant that forms a civil body and thus, it established written constitutions to govern the civil body (Philbrick, 2007). The creation of the civil body assisted the republic in securing liberty in the society. The strong connection between the republic and the Mayflower promoted the use of democratic practices in government.

The democratic system of the American government also promoted a strong relation between the republic and the Mayflower impact. This created a democracy in which the citizens were able to participate in the system of government. It allowed the citizens to form their self-
government and thus, it promoted democratic administration. As the country developed, the political party that made relevant decisions became unrealistic. The conceptualization of their constitutional republic and the Mayflower relationship only allowed the American people to interact in the republic indirectly. Thus, the citizens could only be a part of the governance process indirectly.

However, due to the need for efficiency, the people were allowed to delegate government to the government in the election process. The politicians transformed the country into a constitutional republic from a democracy and thus, many Americans did not believe that democracy and constitutional republic could apply interchangeably. The emergence of Mayflower aspects helped to understand the balancing of the republic and democracy in order to promote order and understanding in the society (Barbour & Wright, 2013). In relations to the constitutional republic, the proper checks and approaches are relevant in balancing the three branches of the federal government. This occurred through the system of federalism in the power that promotes the federal and state governments. Therefore, the concept of democracy facilitates the strong connection between the republic and the Mayflower.

Earlier, the American government used the English Bill of Rights that could be declared as the rights and liberties of the subject in creating the peaceful revolution in 1688. The Bill of Rights sought to prevent abuses in the republic. These include the freedom from interference with the law, freedom from taxation and freedom to elect their representatives without interference. The section of the Bill of Rights, the Blackstone commentaries on the law, sought to bring about the independence understanding in order to consider the constitution. It also insists on the rights provided by God and their religious aspects that promote American Revolution.
These introduced the Mayflower that maintained a good relationship with the republic as it set laws to govern democracy. The Mayflower was recorded as the emergence of the American society by the formation of agreements with the community on norms in written form (Philbrick, 2007).

The connections between the republic and the Mayflower provide authority and improved governance through fair laws. The impact of the Mayflower is a foundation for justice and equality in the society. The connection was facilitated by majority rule in the community. The community decisions were agreed upon in order to create a good consensus that is acceptable in the society. Therefore, the Mayflower concepts promoted the governing of people act as a source of power. The Mayflower compact created written agreements in connection with churches that worship God (Barbour & Wright, 2013). In these forums, they also elected leaders and other church officials. These forums sought to promote self-government as frameworks of political self-government in the Mayflower compact. The aspects of self-government describe the interaction of the republic and the Mayflower that promotes the rule of law (Philbrick, 2007). The concept of self-government in the society occurs by creation of ideas by people. The concept was crucial in creating the strong principles of democracy in the society. The understanding of the Mayflower concepts promotes powerful aspects of self-government. These contribute to the creation of a new democratic country in the society.

In conclusion, there is a strong relationship between the republic and the Mayflower depicted by the agreement of the churches and the rule of law. In addition, the democratic system of the American government also promotes a strong relation between the republic and the Mayflower impact. This creates a democracy in which the citizens were able to participate in the
system of government. On other contexts, the conceptualization of their constitutional republic
and the Mayflower relationship only allows the American people to interact in the republic
indirectly. The strong connection between the republic and the Mayflower promotes the use of
democratic practices in the government.
